Molecular Biology and Genetic Engineering of Yeasts presents a comprehensive examination of how yeasts are used in genetic engineering. The book discusses baker's yeast, in addition to a number of unconventional yeasts being used in an increasing number of studies. 175 figures help illustrate the information presented.

Molecular biology is the area of biology that focuses on the structure of macromolecules, for example proteins and acids, that are essential to life. The theory of evolution has come a long way since Darwin published his theory back in 1859, mainly due to the fact that scientists are able to study organisms in a way that was never possible in the
