Full Power Plus Impeller Kit Replacement For Honda ...

Honda boat motors are strong and long-lasting motors that come in a variety of sizes. The Honda 9.9 is a sub-ten horsepower motor that puts many motors twice its size to shame. The impeller in this Honda motor is a crucial rubber turbine that circulates water through the motor to keep it cool. The impeller draws water through the engine body, depositing it back into the water body the boat sits in. Changing the impeller is a common maintenance procedure, as, over time, it can become cracked ...

Use the service kit if only the impeller is worn. Use the rebuild kit if the liner and/or the impeller cover are worn. ASSEMBLY 1. Start reassembling the pump by applying marine grease to the inner surface of the impeller liner, housing O-ring, and the water tube seal ring. 2. Install the impeller by turning it counterclockwise into the impeller liner.

Luckily, water pump impellers are relatively simple to instal, but they do fail regularly so it is wise to carry an extra water pump and tools onboard at all times and replace the impeller at least twice a year. 2) Check the Water Intake. Turn the engine off and check for anything, such as weeds or trash, which may be blocking the water intake. If a foreign object is present, remove it and restart the engine after it has returned to normal temperature. 3) Check the Water Output

Fix No Water Circulation in the Outboard Motor L & M ...

Most outboard maintenance schedules call for inspection of the impeller every 100 hours, or once a year. And once you've paid a tech to drop the gearcase and look at the impeller, you might as well spend another \$25 and get a new one installed. The entire job is about \$100 of cheap insurance.
